

SEW-EURODRIVE SIMPLIFIES PRODUCT SELECTION FOR CUSTOMIZED SOLUTIONS WITH WEB-BASED PT PILOT® V3.0

Lyman, SC – Feb. 28, 2007 – SEW-EURODRIVE, the world's leading manufacturer of gearmotors, has made it easier than ever to design customized solutions for power transmission and motion control applications with the introduction of PT Pilot v3.0, the web-based upgrade to its popular leading drive selection tool.

SEW's modular product designs make it possible to choose from millions of different configurations. PT Pilot v3.0 simplifies the choices and identifies a solution customized for each application in minutes. The powerful tools at www.ptpilot.com include technical documentation and pricing, and can be accessed using a standard web browser. No special software or plug-ins are required. The entire process is intuitive and completely paperless.

To access SEW's extensive catalog of gearmotor products, enter either the horsepower and speed requirements of an application or type in the SEW model number. PT Pilot v3.0 then moves through a series of point-and-click screens to select the gearbox, inverter, motor, mounting position, conduit type and other components that best meet design requirements. All options available for each unit are listed to help further refine selections.

Designed to speed product selection and increase order accuracy for both customers and distributors, PT Pilot automatically generates SEW nomenclature and order specifications. Each session results in a final quote with specifications, dimensions and pricing that can be printed out or emailed to place an order.

PT Pilot v3.0 allows each session to be saved and opened later to make changes or to place an order. One important advantage is the shared quotations feature. It lets companies set up their engineers and purchasing agents on a shared account with multiple account numbers. Once an engineer has completed design specifications, a purchasing agent can quickly retrieve the quote and place an order.

To explore the full range of intuitive features this enhanced upgrade of PT Pilot has to offer, visit www.ptpilot.com.

About SEW-EURODRIVE

Engineering excellence and customer responsiveness distinguish SEW-EURODRIVE, a leading manufacturer of integrated power transmission and motion control systems. SEW solutions set the global standard for high performance and rugged reliability in the toughest operating conditions. With its global headquarters in Germany, the privately held company has more than 11,000 employees with a presence in 46 countries worldwide. U.S. operations include a state-of-the-art manufacturing center, five regional assembly plants, more than 63 technical sales offices and hundreds of distributors and support specialists. This enables SEW-EURODRIVE to provide local manufacturing, service and support, coast-to-coast and around the world. For more information, visit www.seweurodrive.com.
